

INVITATION
11 to 12 April 2007
European Parliament • Brussels

„Fair Energy Round Table“

Chances and Perspectives for a New Energy Future

OKOSOZIALES
FORUM EUROPA

ENERGIE AG

Preface:

Climate change and energy use are two sides of a coin. Europe has to respond in one strong voice to these prospective challenges. In particular Europe has to meet these challenges on energy efficiency, renewable energy sources and increasing energy-autonomy. The event will give insight into EU energy policy, further necessary changes as well as into best practice experiences.

Since early 2006, the discussion in the EU has been intensified. Actions such as e. g. the Biomass Action Plan, the new Energy Policy for Europe as well as the conclusion of the EU council in March 2007 point out steps for Europe towards leadership in the global energy debate. The Round Table at the European Parliament aims to continue an intensified international debate on concrete action.

The Fair Energy Round Table is a side event of the international ENERGY GLOBE TV Gala
