**CAN-Europe statement on  
“The European Green Hydrogen Charter” –  
A manifesto of MEPs to prepare for the Hydrogen Economy**

The members of Climate Action Network Europe believe that we must build a sustainable European energy system that can power our energy needs without harmful social, environmental and climate impacts. This will require significant increases in energy efficiency and energy conservation as well as swift deployment of renewable energy technology. Hydrogen technology can play an important part in such a future sustainable energy system.

The EU should lead the way globally to ensure that the development and deployment of hydrogen technology is done sustainably, based on renewable sources of energy. We therefore applaud the Members of the European Parliament for this initiative and urge more MEPs to become signatories to the charter.

We are looking forward to cooperating with you to ensure that Europe continues to develop its renewable energy capacity, so that hydrogen production from renewable energy sources is a key pillar of a future sustainable energy system.
